Please use the space below to highlight any problems you have encountered in making your subject choices; these may include alternative subject combinations. All feedback will be reviewed. Please note that all subjects are offered subject to demand.

Comments:

Notes:

1 All students study the core curriculum subjects of English, Mathematics and 2 Sciences. All students study Chemistry, and they then choose between Biology and Physics. Biology is more content and language heavy, and Physics requires a greater degree of mathematical competency.

2 The non-examined curriculum is followed by all students. It adds diversity to the daily routine of school life, broadening life-experience and providing additional opportunities for achievement and success.

3 EAL = English as an Additional Language.
